"MOLecular cloning, functional characterization, and chromosomal
localization of a human somatostatin receptor (somatostatin receptor
type 5) with preferential affinity for somatostatin-28.";
MOL Pharmacol. 45:417-427(1994).
-i- FUNCTION: RECEPTOR FOR SOMATOSTATIN-28. THE ACTIVITY OF THIS
RECEPTOR IS MEDIATED BY G PROTEINS WHICH INHIBIT ADENYLYL CYCLASE.
-i- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-i- TISSUE SPECIFICITY: PROMINENT IN THE PITUITARY AND SMALL
INTESTINE. LOW LEVELS IN ISLETS AND SPLEEN. NOT DETECTED IN

-!- FUNCTION: C-TERMINAL ALPHA-AMIDATION OF PEPTIDES.

C -!- FUNCTION: C-TERMINAL ALPHA-AMIDATION OF PEPTIDES.

C -!- CATALYTIC ACTIVITY: PEPTIDYLGLYCINE + ASCORBATE + H(2) - PEPTIDYL(2-HYDROXYGLYCINE) + DEMYDROASCONBATE + H(2) O.

(THE PRODUCT IS UNSTABLE AND DISMITATES TO GLYOXYLATE AND CORRESPONDING DESGLYCINE PEPTIDE AMIDE).

-!- COFACTOR: COPPER, AND ASCORBATE.

-!- SUBCELLULAR LOCATION: SECRETORY GRANULES.

C -!- SUBCELLULAR LOCATION: TO THE COPPER TYPE II, ASCORBATE-DEPEN MONOOXYGENASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   documentation_block:

FUNCTION: REGULATORY PHOTORECEPTOR WHICH EXISTS IN TWO FORMS THAT FUNCTION: REGULATORY PHOTORECEPTOR WHICH EXISTS IN TWO FORMS THAT ARE REVERSIBLY INTERCONVERTIBLE BY LIGHT: THE PR FORM THAT ABSORBS MAXIMALLY IN THE RED REGION OF THE SPECTRUM AND THE PFR FORM THAT ABSORBS MAXIMALLY IN THE FAR-RED REGION. PHOTOCONVERSION OF PR IN PER INDUCES AN ARRAY OF MORPHOGENIC RESPONSES, WHEREAS FR INDUCES AN ARRAY OF MORPHOGENIC RESPONSES, WHEREAS RECONVERSION OF PFR TO PR CANCELS THE INDUCTION OF THOSE RESPONSES. PFR CONTROLS THE EXPRESSION OF A NUMBER OF NUCLEAR GENES INCLUDING THOSE ENCODING THE SMALL SUBBNIT OF RIBULOSE-BISSHOSPHATE CARBOXYLLAS, CHLOROPHYLL A/B BINDING PROTEIN, PROTOCHLOROPHYLLIDE REDUCTASE, RRNA, ETC. IT ALSO CONTROLS THE EXPRESSION OF ITS OWN GENE(S) IN A NEGATIVE FEEDBACK FASHION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TATCAACACCCTTGAAATTAGCGATGATAATCAAGCT
